***ANNUAL SCHOOL CENSUS REPORT  
2009 – 2010***

**JUNE 2010**

# **KWARA STATE SCHOOL CENSUS REPORT 2009-2010**

Kwara State Ministry of Education, Science and Technology

**August 2010**

## **Preface**

The Education Reform Agenda of the present administration called “Every Child Counts” requires a foundation of reliable and accurate data to succeed. Before the Annual School Census of 2009, data collection and all census matters had been centrally controlled by the Federal Ministry of Education. However under the new decentralisation policy, the 2009/2010 Annual School Census became the responsibility of the state. This enabled the Ministry to inject a new spirit of diligence, transparency and accountability into the process, driven by trained and more motivated officers carrying out the exercise.

The Annual School Census is one of the main tools providing information to assess progress in the implementation of our Education Strategic Plan (ESP) particularly the first Medium Term Sector Strategy (2010 – 2012). The current report presents the findings of the 2009/2010 School Census. I am certain that the report will serve as an authentic source of data on education in Kwara State that it will be of great use not only for the MTSS process (2011-2013) that would soon commence, and for the State Education Sector Plan (ESP), but that it is useful for Nigeria’s educational system as a whole.

I wish to congratulate the Department of Planning, Research and Statistics of the Ministry and all other officials from the MDAs, LGAs, LGEAs, Head teachers and other Stakeholders that contributed towards the conduct of the exercise and the preparation of this report. I would also like to thank the Education Sector Support Programme in Nigeria and the State Education Sector Plan for their support.

Bolaji Abdullahi  
Honourable Commissioner  
Ministry of Education, Science and Technology  
August 2010

## **Executive summary**

Kwara's Annual School Census of November 2009 was conducted in a much more effective manner than in previous years with the entire method of carrying out the work having been changed. This report captures the main features of Kwara's pre-primary through senior secondary education system in a series of tables, out of which several important issues come out.

Response rates for the census were very high with regard to the public sector, at 97-98% depending on the level. Despite efforts to audit, unify and rationalise the various school lists in existence in early 2009, problems persisted, particularly in the area of the private school list, which under-represents the actual number of private schools. The true number is still not known, but many more private schools were captured than were on the school list. Table 2.1 therefore shows a very high response rate, while this is only an incomplete picture. The private sector is growing, along with some decline in public school enrolments; private schools exist across LGEAs, but in greater density in urban areas.

In terms of equity across the schooling system, girls are under-represented in secondary schools, although there is variation in this trend across LGEAs, with the most remote, rural areas having the worst gender disparity. The gender gap is less in private schools, but much greater in nomadic and islamiyyah integrated schools, indicating that girls from the latter groups may be some of the more difficult to reach. There is much more male repetition in senior secondary schools, which may indicate girls being more likely to drop out when they fail a year. With regard to pre-primary education, the bulk of enrolments are in the private sector, and with growing evidence that this stage of education is vital to a child's future success in education, access being available largely only to those who can pay raises equity concerns. A great deal more government pre-primary provision is required, with two LGEAs providing no education at this level. Pupils with disabilities also fare poorly, with the number of children with disabilities in senior secondary 3 being only 21 percent of the number of similar children in primary 1 in the current year.

The overall trend in enrolments shows that enrolment falls as the class level increases, with this drop being less in the private sector. Transition points (for example primary to junior secondary level) show an increase in enrolments in the private sector, possibly indicating that private secondary schools may be the only options in certain areas, while enrolments in public junior secondary tend to rise, because of the establishment of more junior secondary schools by the State Universal Basic Education Board (SUBEB) in remote areas and possibly because of some interplay between public and private schools. Over all there is less provision at secondary level, across public and private sectors.

There is a rural-urban divide in several aspects of the schooling system: teacher deployment is poor, leading to much higher pupil-teacher ratios in the most remote LGEAs as teachers tend to favour urban areas. The over all pupil-teacher ratio for the state is also low, at 12 pupils per teacher in primary schools. In rural areas coverage of secondary schools tends to be somewhat less, while rural girls appear less likely to complete the various levels of education.

Teachers at the pre-primary level are often unqualified (approximately half), while most primary teachers are qualified, and the vast majority of secondary school teachers are qualified. In addition, at the time of the census, around one quarter of teachers had gone on training courses or seminars in the past year.

With regard to school facilities, approximately a third of Kwara's classrooms are in need of major repair, very few classrooms have sufficient seating and a considerable percentage do not even have a serviceable blackboard. Water and sanitation provide the largest infrastructural challenge, with 65% of primary schools having no source of water, and 85% of primary schools having no toilet. Pupil-classroom ratios are also high across the state, with some LGEAs having particular problems in this area. Provision of these facilities is not significantly better at the secondary level, however there is a large disparity in infrastructural provision between LGEAs.

SMOE	State Ministry of Education
SUBEB	State Universal Basic Education Board

# **1 Background**

For over four decades, Nigeria had observed School Census Day, traditionally held between February and March every year. Between 1998 and 2000 the Federal Ministry of Education (FME) in collaboration with UNESCO embarked on the computerisation of data from the Annual School Census for ease of use. The National Educational Management Information System (NEMIS) and State Educational Management Information Systems (SEMIS) were launched in the same period. The ASC was a federal exercise until decentralisation of the process came into effect in 2009, with this report being the product of the first decentralised ASC.

In the past, school census forms were completed by head teachers with no training provided. The forms were overly long and complicated, and represented a serious challenge to most head teachers to complete accurately. Data collection tended to become later and later, with the census for 2007/08 taking place in November 2008: a retrospective 'census'. The data would take much time to process, particularly with the breakdown of the NEMIS system, which has meant that the results of the census have had little use for planning due to the late release of the data.

This year's census was a departure from the past in every way: the census form was drastically shortened and focused specifically on gathering information that would be of use for planners. Kwara State was one of only two states to hold a workshop on the draft form, with feedback from this workshop influencing the federally adopted census form.

The census was held at the end of the first school term in order to allow time for processing the data so that it could be used in planning processes for the following academic year. This has never before been achieved. Trained enumerators were used in order to get the correct information from head teachers to answer questions on the census form, with field coordinators supervising the work and checking forms as they were gathered at LGEA headquarters. This is a departure from the old method where it was left to the head teacher's interpretation. Completed forms were returned in a timely fashion to the Ministry of Education in Ilorin for data entry and then analysis. A new software package was developed with the support of ESSPIN which made the data entry process easier than in previous years. In addition, where questionnaires were found to be incomplete or containing the wrong data, these forms were sent back to schools for correction, leading to the most accurate census data to date. While systems and processes have been drastically overhauled, the way these are carried out must be improved and further strengthened for 2010/11.

Despite the many improvements during 2009/10, it should be highlighted that certain data should be viewed with caution. This includes the number of pupils that are within the official age range for their level of education. In addition, the number of schools reporting the existence of an SBMC that has met within the last year appears to be higher than is actually possible, based on the current state of SBMC development in the state. The number of school development plans should also be viewed with a small degree of caution; these issues largely come down to problems with school record keeping, at which training and development efforts will be targeted for the next census cycle.

The setting up of the Annual School Census Committee headed by the Director PRS, MOEST, the use of LGEA and LGA Staff as Enumerators and Coordinators, Senior Officials of the MDAs as Supervisors and 2 Monitoring teams: (One by the Directors of the MOEST and the other by the ESSPIN) brought a remarkable difference to the exercise. A feeling of the ASC as a serious and important activity of the state has made much difference to the outcome.

## 2 Schools

A process of consolidation of the various school lists started in June of 2009. This process involved the LGEAs and parastatals in various iterations. These efforts were intended to result in a single school list comprehensive of all sectors (public and private) and levels (pre-primary, primary, junior secondary and senior secondary). This was not quite achieved for this year, but will be for the following census cycle. The data collection process was comprehensive enough to capture several schools that were not in the existing school list, while some schools in the list were not captured, at least not with the same name.

A comprehensive and thoroughly audited school list will result from the census process for 2010/11 and from further efforts by EMIS unit staff in conjunction with LGEA PRS staff. Table 2.1 provides the details of the number of schools captured by level, including those on and off the school list used for the census exercise.

**Table 2.1 Number of schools**

Original school list	Public			Private All levels
	Pre-primary and Primary	Junior secondary	Senior secondary	
1A. Responded	1,443	338	233	516

**Table 2.2 Number of private schools by level**

	Number of schools		Number of schools
Schools with pre- primary classes	585	Of which are pre-primary only	14
Schools with primary classes	609	Of which are Primary only	37
Schools with junior secondary classes	166	Of which are Junior secondary only	53
Schools with senior secondary classes	124	Of which are Senior secondary only	26

A total of 749 private schools (often teaching several levels) were captured; some schools reported different levels on separate forms, leading to a total of 940 census entries (as reflected in table 2.1).
