Introduction

Good teaching can help learners achieve positive outcomes, even in difficult circumstances. But learners have little chance of making progress where the teaching is poor.

Throughout 2010 in Kaduna State, the Ministry of Education carried out baseline surveys to assess classroom teachers, headteachers and pupil learning outcomes. Sadly, the findings were alarmingly poor. It was clear that despite substantial inputs into education, the majority of teachers were themselves victims of an education system that was in a serious downward spiral.

Following this research, the State Ministry of Education, the State Universal Basic Education Board and local government education authorities, supported by the Education Sector Support Programme in Nigeria (ESSPIN), embarked on a series of reforms to strengthen schools.

To improve the teaching of basic literacy and numeracy in primary schools, Kaduna is introducing a carefully designed series of literacy and numeracy lesson plans for primary 1–3 teachers. These provide a step-bystep guide to teachers, while ensuring that teaching and learning become more exciting and children become active learners. Alongside the lesson plans, structures and processes have been put in place so that teachers are continuously supported by the State School Improvement Team and specially-trained school support officers.

I am confident that these lesson plans will raise standards in our schools. I commend all those who have worked hard to produce these plans and train our teachers to use them, and I offer thanks to the UK Department for International Development (DFID) for its ongoing support for education reform in Kaduna State through its ESSPIN programme.

Professor Andrew Jonathan Nok

DSc, PhD, OON, FAS, NNOM

Term 3 Asking questions

Introduction Asking questions

۲

Weeks 21—25

۲

Effective questioning in the classroom

Pupil participation

Thinking time

۲

Different questions

Questioning is a very useful way to find out what pupils already know and whether they understand what they are learning. It is also a strategy to measure how successful your teaching is.

When you use questioning as part of your teaching, you are involving pupils in their learning, and giving them immediate feedback. This is a good way to develop motivation. Ask pupils to discuss questions in pairs or small groups. This is a good way to get the whole class talking. It gives pupils the chance to explain their thinking.

Explain to your class that the question is for them to discuss in a pair or a group. Tell them they have 2—3 minutes to discuss it. Ask the question and walk around the class listening to the pupils talk. You can then ask further questions to extend their thinking or help their understanding.

It is really important that when you ask pupils questions you count to 15 in your head before you choose someone to answer. This gives all pupils the chance to think of something to say, not just the 'quick thinkers'.

When asking questions remember to choose pupils from different areas of the classroom – choose pupils who do not have their hand up and choose pupils whose understanding you want to check. The main types of questions are 'closed' questions and 'open' questions. When you ask closed questions there will only be one answer, eg: 'What is 3 x 4?', 'What colour is the dog in the story?'. It is easier to ask closed questions. An open question is one that has many answers, eg: 'What do you think Hassan likes doing on a Saturday?' Asking open questions makes children think of different ideas.

If pupils give you a different answer to the one you are expecting, think carefully about their reasoning – it could be that it is a reasonable answer, just not the one you are expecting.

۲

Counting 0—99

Learning outcomes

By the end of the lesson, most pupils will be able to:

Tell the time using o'clock.

Identify the numbers 0—99 using a Hundred square.

Teaching aids

Before the lesson:

Have ready the big clock and make card clocks with moveable hands for each group.

Have two sets of 0—9 number cards, a small stone and bundles of Tens and Units ready for each pair.

Read MAN Primary Mathematics 1, page 76.

Daily practice

15 minutes

Group task

Ask the pupils to tell you the time they come to school every day.

Give each group a clock and show them how to make that time.

Ask them to explain how the hands on the clock work, ie: the short hand counts the hours and the long hand counts the minutes.

Show 1 o'clock on the big clock and ask the groups to say the time.

Ask them to move their clocks to 1 o'clock, 2 o'clock, and so on.

Tell the groups to hold up their clocks and say the times.

Make sure everyone has a turn making the time.

Group task

Ask each pupil to find the Hundred square in MAN Primary Mathematics 1, page 76.

Give each group 100 counters and a set of 0-20 number cards.

Ask each group to shuffle the number cards and put them in a pile.

Tell them to turn over a number card and put that number of counters on the correct number on the Hundred square.

Continue round the group until they have covered 20 squares and each pupil has had a few turns.

Week 23 Subtraction 0—20 Day 1

Subtraction 0-20

Learning outcomes

By the end of the lesson, most pupils will be able to:

Read o'clock and half past times on a clock.

Solve simple problems using different terms for subtraction.

Teaching aids

Before the lesson:

Have ready the big clock and the counters from last week.

Make subtraction flash cards: 'take away', 'minus', 'How many less than?', 'subtract', 'What's the difference between?' Display them in the classroom after the lesson.

Have ready a set of 0—9 number cards and a 'less than' card for each group.

Daily practice

15 minutes

Whole class teaching

Ask the pupils how many hours there are in a day.

Show them the clock and ask them to say the hours on the clock.

Tell them you are going to show them some o'clock times for daytime.

Ask them to say the time and what they do at those times.

Repeat with some o'clock times for night-time.

Taller and longer

Learning outcomes

By the end of the lesson, most pupils will be able to:

Identify the Tens and Units in a two-digit number.

Use the comparative terms 'is taller than' and is 'longer than'.

Teaching aids

Before the lesson:

Make sets of Tens and Units place value cards, enough for each pair to have a set.

Daily practice

Song

Pair task

15

minutes

Sing '10 chunky chickens' with the class.

Give each pair a set of place value cards.

Tell the pupils they are going to make the number 45.

Show them how to use the place value cards to make the number 4.

Ask them how many Tens and how many Units there are in 45.

Ask them to use the place value cards to make the following two-digit numbers: 62, 43, 71, 22, 35.

Term 3 Asking questions

Week 25 Comparing length Day 4

Comparing lengths

Learning outcomes

By the end of the lesson, most pupils will be able to:

Identify the Tens and Units in a two-digit number.

Estimate lengths using the phrase 'shorter than'.

Teaching aids

Before the lesson:

Have ready a set of place value cards and bundles of Tens and Units for each pair.

Have ready pairs of objects of different lengths, eg: long and short rulers, books and sticks.

Read MAN Primary Mathematics 1, page 127.

Daily practice

Pair task

Give each pair a set of place value cards.

Ask the pupils to work with their partner to make 88, 61, 95, 56 and 74 using the place value cards.

Ask them to make each number using their bundles of Tens and Units.

Ask the pupils how many Tens and how many Units are in each number. | 15 | minut<u>es</u>

Term 3 Asking questions

Week 25 Comparing length Day 5

۲

Comparing length

By the end of the lesson, most pupils will be able to:

Learning outcomes

Use a number line to show the position of a number, using 'before', 'after' and 'between'.

Compare the length and height of two similar objects.

Teaching aids

Before the lesson:

Collect sticks or straws of different lengths – enough for each pupil to have one.

Draw pictures of pairs of objects of different sizes on the chalkboard, eg: trees, snakes, houses, rivers, doors.

minutes | Mathematics 1

MAN Primary

Pair task

15

Ask the pupils to find the number chart at the back of MAN Primary Mathematics 1.

Ask them to work together to find the answers to the following questions:

'What number comes one before: 28, 46, 38, 25?'

'What number comes one after: 18, 39, 24, 43?'

'What number comes between: 45 and 47, 12 and 14?'

Walk around the class and ask pairs to show you the answers on the chart.

Special thanks go to:

In 2008, Kwara State carried out a Teachers' Development Needs Assessment for all primary school teachers. This showed that most teachers in Kwara State did not have strong literacy and numeracy skills. The Kwara State Government responded by developing a strategy to support existing teachers and improve new teachers' pre-service training.

These literacy and numeracy lesson plans, developed by the Kwara State School Improvement Team, were part of that strategy. Two years after introducing these plans alongside the training and support programme, Kwara State began to see strong improvements in teachers' teaching skills and pupils' learning outcomes.

The Honourable Commissioner and staff of the Kwara State Ministry of Education and Human Capital Development, as well as the Kwara State Universal Basic Education Board for their support and valuable input and for agreeing to share these plans with other states.

The UK's Department for International Development (DFID) and the DFID-funded ESSPIN programme for their input, focus, guidance and constructive criticism throughout the development of the plans.

Thanks also go to the teachers of Kwara State who have used these plans to bring about change in their classrooms.
