۲

Numeracy lesson plans Primary 2 Term 1 Creating an effective learning environment

()

This is the first in a series of six numeracy lesson plan publications, designed to be used throughout the three academic school terms.

Introduction

The quality of education is a key element to socioeconomic development in any society. Perhaps the most critical element in ensuring quality of education to output. The majority of is the teacher. Good teaching methodology, with the right textbooks. will quickly provide a good platform for a quality education system in Kano State.

The challenges are sometimes overwhelming when vou have 5.335 schools with over 2.3 million children and 46.643 teachers. The Kano State Ministry of Education carried out a series of baseline surveys to assess classroom teachers, the role of the head teacher and the level of pupil learning outcomes.

The findings in most cases were alarmingly poor, with not much difference between qualified and unqualified teachers with respect teachers were themselves victims of an education system that was in a serious downward slope.

Following this, the Kano State Ministry of Education, the State Universal Basic Education Board (SUBEB) and local government education authorities (LGEAs), supported by the Education Sector Support Programme in Nigeria (ESSPIN), embarked on a series of reforms that will help strengthen schools.

This work has focused on classroom teaching skills in particular how to make teaching child-centred and the organisational structures needed for SUBEB and LGEA staff to provide effective support and advice to primary schools.

۲

With many school leavers unable to read or write. a specific focus has been on improving the teaching of basic literacy and numeracy. To support this, Kano State has developed a benchmark for assessment and carefully designed literacy and numeracy lesson plans for Primary 1—3 teachers. These plans provide a step-by-step quide to teachers, while ensuring children become active learners.

The lesson plans, however, are not sufficient. Structures and processes have also been put in place so that teachers are continuously supported by both the State School Improvement Team and the LGEA-based school support officers.

We are sure that within a short time of these lesson plans being introduced, children's learning abilities will improve considerably. The materials will also enable teaching and learning to be more exciting - an important element in all classes, but in particular at the primary level. We are confident that these lesson plans will raise standards and improve the quality of children proceeding to higher levels of education.

We commend all those who have produced these lesson plans and trained our teachers to use them. We offer thanks to the UK Department for International Development (DFID) for its ongoing support to education reform in Kano State through its ESSPIN programme. Let's make every Kano school an improving school.

An effective learning	2	3	4
environment	Build good relationships	Use classroom space	Display
The school environment has to make pupils feel comfortable, and stimulate their minds for learning to take place. There is plenty you can do to improve the feel of the classroom for your pupils. 1 Teaching methodology The lesson plans use a large variety of activities. If followed carefully, they will keep the pupils interested, motivated and will support effective learning in a structured way. These methods are designed to involve pupils in their learning and give them the opportunity to learn from each other.	 Learn all your pupils' names and use them frequently. Find out about your pupils' lives and interests by listening to them and asking questions. Greet them individually in the mornings and encourage them to greet and talk to each other. Tell them about yourself and your family. Pupils love finding out that teachers are 'human' too! Notice when pupils are unhappy and make an extra effort to be friendly to them. Smile and make learning fun for the pupils. Praise and encourage pupils for effort and achievement, instead of punishing them for 'laziness' or getting things wrong. Shouting and treating your pupils harshly, or beating them, will affect them emotionally and make them unable to learn. 	 Arrange the seating in different ways. Look at the photo- graphs in some of the lesson plans to help you think of different ways of working. U-shaped formations mean all the pupils can see each other and there is a space in the middle for activities. Pushing tables together means that four or six pupils can sit together. If there is no space in your class- room, take the pupils outside to play circle games or do activities. 	<text><text><section-header><section-header></section-header></section-header></text></text>

Week 1 1—100 Day 1

۲

Counting to 50

By the end of the lesson, most Wr pupils will be able to:

Identify the hour and minute hand of the clock and say the time using o'clock.

Learning outcomes

Recognise the numbers 1—50.

Teaching aids

Before the lesson:

Have ready a large dummy or real clock.

Have ready a large Hundred square for class use during the term.

Have ready a Hundred square for each pair of pupils.

Provide one set of place value cards for each pair of pupils.

Daily practice

Whole class teaching

Show the wall clock to the pupils.

Ask the pupils to tell you what we use a clock for.

Ask them to talk to the person sitting next to them and think of two reasons why we need to be able to tell the time.

Ask each pair to tell everyone one reason, eg: so that everyone comes to school at the same time.

Write their reasons on the chalkboard.

Ask the pupils to say the days of the week with you, in order.

۲

Counting to 100

Learning outcomes

By the end of the lesson, most pupils will be able to:

Tell the time using o'clock.

Identify the numbers 1—100 using a Hundred square.

Use a Hundred square to count forwards and backwards from any given points.

Teaching aids

Before the lesson:

Have ready a large dummy wall clock or real clock.

Have ready a Hundred square for each pair of pupils.

For each pair of pupils provide one set of number cards from 0—9 and a small stone.

Daily practice

Whole class teaching

Ask the pupils to tell you any times that they know, eg: at 8 o'clock we come to school. Record their ideas on the chalkboard.

Explain that the long hand of the clock points to the hour and the minute hand to the minutes.

Point the long hand to the 12 and the short hand to the 2, and tell the pupils that this is 2 o'clock, because the minute hand is pointing to the number 12 and the hour hand is pointing to 2.

Show 1 o'clock on the large wall clock and ask individual pupils to say the time.

Repeat with different o'clock times.

10 minutes		25 minutes		10 minutes
Introduction		Main activity		Plenary
Whole class teaching		Pair task		Whole class teaching
Use a large Hundred square and ask pupils to count together from any given number for about 15—20 numbers. Repeat from different starting points. Say any number between 0—100 and ask pupils to put up their hands and come out to show where they belong on the Hundred square. Ask the pupils to look at their Hundred square.	Clean a number from the large Hundred square. Ask every pupil to look at their Hundred square and find the missing number. Ask if anyone can come and write the correct number in the space. Repeat two or three times with different numbers.	 Give each pair a set of place value cards. Tell them you are going to call out a number and they have to make that number. Call out random numbers to 100, starting with a low number, eg: 27. Ask each pair to make the numbers. Ask them to check their answers using their Hundred square. If anyone has the numbers the wrong way round, eg: 72 instead of 27, ask if anyone can explain why they are the wrong way. 	Remind the pupils that 72 is 7 sets of Ten and 2 Units, and 27 is 2 sets of Ten and 7 Units. Ask them to make 27 using their bundles of 10, ie: two bundles of 10 and seven single straws. Continue until you have called about five numbers. Ask pupils to use the place value cards and bundles of 10 to make a number of their choice and then find it on the Hundred square.	Revise the way to form the numbers 0—9, eg: to write '1' the pencil moves from the top to the bottom.

Week 2 Tens and Units Day 1

۲

Less than

Learning outcomes

By the end of the lesson, most pupils will be able to:

Recognise half past on the clock.

Use the term 'less than'.

Teaching aids

Before the lesson:

Have ready a wall clock and a cardboard clock for each group.

Have ready number 0—9 cards and 'is less than' and 'is smaller than' flash cards.

Provide four bottle tops and a copy of Chart 1 per group for the 'Target throw' game.

Have ready the bundles of Tens and Units.

Daily practice

Group task

Ask the pupils to draw a line to divide their clock in half, from the 12 to the 6.

Ask them to write the word 'past' on the half of the clock from 12—6 and 'to' on the half of the clock from 6—12.

Explain that when the minute hand goes half way round the clock and points to the number 6 that this is called half past.

Ask them to move the minute hand to the 6 and say 'half past'.

Ask them why they think it is called half past, ie: because it travels half way around the clock.

۲

Less than

Learning outcomes

By the end of the lesson, most pupils will be able to:

Recognise half past on the clock.

Compare numbers using the terms 'greater than', 'less than' and 'equal to' another number.

Teaching aids

Before the lesson:

Have ready cardboard clocks for each group.

Have ready a set of place value cards and a Hundred square for each pair.

Have ready flash cards 'less than', 'greater than' and 'is equal to'.

Have ready the bundles of Tens and Units for pupils to use.

Daily practice

Group task

Ask the pupils to remind you what they learned yesterday about 'half past'.

Ask them to show you the position of the minute hand for half past.

Show the time 'half past one' and explain that the hour hand has gone past the number 1.

Ask them to make the time on their clocks then show you half past two, half past three and so on, in order, up until half past 12.

Curves and straight lines

Daily practice Learning outcomes By the end of the lesson, most Whole class teaching pupils will be able to: Call out numbers at random Identify the number of Tens and ask the pupils to work and Units in a number. out how many Tens and Units they have. Identify curves and straight lines. Ask them to show you the number using the place value cards. **Teaching aids** Ask them to make the number using bundles of straws. Before the lesson: Repeat with different numbers. Have ready Tens and Units place value cards and bundles of Tens and Units for the pupils. Make a shape chart for each group by drawing a triangle, a rectangle, a circle and a square on the back of a calendar. Have ready a bottle top or similar object for each group to throw at their chart. Make two signs: 'curves' and 'straight lines'.

10 minutes	25 minutes			10 minutes
Introduction	Main activity			Plenary
Whole class teaching		Group task		Whole class teaching
Show the pupils the shapes in turn and ask them the following questions: 'What's the name of the shape?' 'How many sides does it have?' 'Are the sides straight or curved?'	Ask two pupils to come out and stand either side of the room holding the signs: curves and straight lines. Ask the rest of the class to look at the shapes and say where each should go. If a shape has both curves and straight lines, ask them where they think it should go.	 Give a chart to each group and ask them to put the chart on the floor next to their table. Explain that they should take it in turns to throw the bottle top and try and make it land on a shape. Every time the bottle top lands on a shape, they should draw a small shape inside the large one. Listen to make sure that they are using the correct names for the shapes. 	 When they have each had two turns, ask them to count the number of small shapes they have drawn and write the number inside the large shape. Ask each group to tell you how many times the bottle top fell on each shape. 	Ask each pupil to think of one thing they have learned about shapes over the past few days. Ask individual pupils to share their ideas with you.

Week 4 Addition Day 5

۲

Target throw game

Learning outcomes

By the end of the lesson, most pupils will be able to:

Count in Tens.

Add two numbers together.

Teaching aids

Before the lesson:

Prepare a 'Target throw' chart for each group according to the instructions in the introduction and the diagram opposite.

Prepare one bottle top for each pupil, labelled with singledigit numbers, including 0.

Daily practice

Whole class teaching

Give out the numbered bottle tops.

Ask the pupils to find a partner and stand with them to make a two-digit number with their bottle tops.

Ask them to call out their number and express it as Tens and Units, eg: 37 is 3 Tens and 7 Units.

Repeat, asking them to make different numbers each time.

Ask them to find another pair and make as many numbers, between 10 and 99, as they can from the numbers on their bottle tops.

Ask them to write those numbers as Tens and Units.

10 minutes	25 Game minutes		10 minutes
Introduction	Main activity		Plenary
Whole class teaching	Group task		Whole class teaching
Explain the rules of the 'Target throw' game.	Divide the pupils into small groups and give each a copy of the charts you prepared and a set of bottle tops from 1—9. Ask each player to throw their bottle top on to the chart. Ask them to write a sum to add the number it landed on to the number on the bottle top, eg: $7 + 30 =$ Ask them to expand the two-digit number and rewrite the sum in that form, eg: $7 + 10 + 10 =$	Encourage the pupils to use their Hundred square to help them find the answer. Ask them to continue playing until everyone has had a turn.	Ask the pupils to tell the class how they managed to add the two numbers and how they knew they had the correct answer.

Special thanks go to:

In 2008, Kwara State carried out a Teachers' Development Needs Assessment for all primary school teachers. This showed that most teachers in Kwara State did not have strong literacy and numeracy skills. The Kwara State Government responded by developing a strategy to support existing teachers and improve new teachers' pre-service training.

These literacy and numeracy lesson plans, developed by the Kwara State School Improvement Team, were part of that strategy. Two years after introducing these plans alongside the training and support programme, Kwara State began to see strong improvements in teachers' teaching skills and pupils' learning outcomes.

The Honourable Commissioner and staff of the Kwara State Ministry of Education and Human Capital Development, as well as the Kwara State Universal Basic Education Board for their support and valuable input and for agreeing to share these plans with other states.

The UK's Department for International Development (DFID) and the DFID-funded ESSPIN programme for their input, focus, guidance and constructive criticism throughout the development of the plans.

Thanks also go to the teachers of Kwara State who have used these plans to bring about change in their classrooms.
